Commission check against the Tier sheet

Date: 9 Nov 2026 · **Followed:** `LIST - TIER 1.csv` (as decided), plus Pedia Handling Fee at 10%. The older per-dentist `LIST - COMMISSION.csv` was used only for what the tier sheet does not cover (HMO). **Checked with:** `scripts/audit-tier-sheet.ts` , which runs the app's own commission code for every dentist that has a tier. Your live data was not touched; the fix below was only tested on a copy.

Result

The tier sheet has 57 rows (plus Pedia Handling Fee). Today **448 checks match, 40 pay nothing, and 11 procedures are not on the price list**. No rate is wrong; things are only missing. With the sync SQL applied on the copy, every line matches, except one: Perez's Temporary Filling (see below).

What is missing in the app

What	Procedures	Fix
Not on the price list (11)	Pedia Handling Fee, Build Up, Coronectomy, Esthetics Filling, Expander, Gingivectomy, High Impact Plastic Dentures, Thermosens Dentures, Twin block, TMJ Adjust, TMJ Down payment	The SQL adds them with their tier rate. Prices are left blank (Pedia Handling Fee is ₱500); you set them on the Procedures page
On the price list, no tier rate (5)	Ortho Adj (25 / 20 / 20), RCM (25 / 20 / 20), Lost Bracket (25 / 20 / 20; the sheet says "Loss Bracket"), Cosmetic Filling (25 / 15 / 15), Flouride Varnish (10 / 10 / 10)	The SQL adds the rate
Individual rate that blocks the tier	Anna Perez, Temporary Filling: 0% cash plus ₱250 HMO, so she earns nothing on cash TF (sheet: 10%)	Remove the override (optional block in the SQL, or "Remove them" on the Commissions page)
Dentist not on the tier sheet	Maria Barbie Dayandante is in Tier 2 in the app, but the sheet lists only Bandayrel and Ahmad there	Confirm her tier

Everything else on the tier sheet already matches: Consultation, OP, PF, TF (except Perez), Simple extraction, Fluoride, Calcimol, all Ortho / TMJ / retainer items, Complicated extraction, Bone Reduction, Whitening, Direct composite veneers, RCT, Post & Core, Post & Build Up, dentures, crowns, veneers, Onlay, Temporary Crown, Ceramage Removal, Clasp, Mouth Guard, Denture Repair, Surgery, and the X-rays (₱70 / ₱30).

Both lists compared: what the two sheets disagree on

The tier sheet wins, so these are no longer a problem: the per-dentist sheet gives Ayapana 20% on Ortho, Banawa and Perez 15%, 20% on RCT and Post & Core for Tier 2 and 1, and 20% / 15% on Surgery and

veneers. The app follows the tier sheet. Only the per-dentist sheet has HMO rules (the tier sheet has no HMO column): 10% on OP, PF, TF and Simple extraction, X-ray pesos ₱50 / ₱30, and Transcranial Xray ₱50. The app pays HMO commission on OP only, and the ₱70 / ₱30 X-ray pesos on every payment type.

Your question: how does the HMO 10% work?

It is **the dentist's commission on that one procedure line**, not on the visit total and not a cut of the dentist's own fee. The base is the amount collected for the line, divided by 1.12 to remove VAT; the % is applied to that. Example: Maxicare OP billed ₱1,200 becomes ₱1,200 ÷ 1.12 = ₱1,071.43, and 10% is **₱107.14** to the dentist. Cash works the same way with the cash %. X-ray pesos are paid as they are. If you meant 10% of the whole visit total, tell me; that would be a different rule. Today HMO pays commission on OP only. Do you want PF, TF and Simple extraction too, as the per-dentist sheet shows? An optional block in the SQL does this.

On the price list, but on neither sheet (19)

These earn nothing today. Suggested handling, please confirm:

- **Ortho group (25 / 20 / 20):** Ortho Diagnostic Fee Complex case (the sheet only has Simple), Sanitation + Ortho Adj, TMJ Package.
- **Dentures (20 / 20 / 20):** Porcelain Denture (Complete, Partial, Per Arch), Immediate Dentures, Denture Reline, Retainer Repair.
- **Whitening (15 / 15 / 15):** Additional Whitening Cycle.
- **No commission:** Reservation Fee, Reservation Fee- Ortho, RCM NO PAYMENT, Rush Fee, Extra Anesthesia, Suture, Cut wire, Mock up wax, Dental Certificate.

To apply (you run these)

1. Run `scripts/sql/2026-11-commission-tier-sheet-sync.sql` in the Neon SQL Editor. It is safe to run twice.
2. Optionally remove Perez's individual rate (SQL block 3).
3. Set prices on the Procedures page for the 10 new procedures and check their VAT type (the SQL guesses).
4. Run `yarn db:backfill-links` so saved rows, including your three screenshot rows, get their commission.
5. Check the Commission report.
