

Minutes of Meeting — Cashflow System Updates

1. Purpose

To go through the requested changes to the Cashflow system for adding transactions and expenses, check them against the clinic's two reports (the Marikina Day End Report and the Operating Expenses list), and agree how each change will work before any work starts.

2. What was reviewed

- **Day End Report (Marikina, October 3, 2026):** 9 entries, total collected 3,965.00. The total matches the sum of the entries.
- **Operating Expenses list:** 11 entries, total 123,891.61. The total matches the sum of the entries.

3. Points discussed and proposed approach

3.1 Discounts (PWD and other discounts)

- Today a discount is typed into the procedure name, for example "OP (Moderate) w/ 5% Discount Dental Network Member", which was paid 1,615.00. That is 1,700.00 less 5%. The original price is lost and the system treats this as a separate procedure.
- **Proposed:** each procedure gets its own price, its own discount, and a reason (PWD, Senior Citizen, Dental Network Member, Promo, Other).
- The discount can be entered either as a **percentage** or as a **fixed peso amount**.
- PWD is a ready-made choice that fills in the usual percentage. The staff can still change it.
- The final price is shown automatically ($1,700.00 \text{ less } 5\% = 1,615.00$). A reason is required whenever a discount is given.

3.2 Several procedures in one visit

- Today staff type procedures together in one box, for example "Sanitation + Ortho Adj", with a single amount. This hides the price of each procedure and makes it unclear which dentist earns commission on which one.
- **Proposed:** one invoice per patient visit, with a new line for every procedure. Each line has its own dentist, price, discount, and VAT setting.
- The invoice shows the full total, and one payment can cover all the lines.
- Card fees and withholding tax are entered once for the payment and shared fairly across the lines, so every dentist's figures still add up.

3.3 VAT and non-VAT

- **Proposed:** each procedure line is marked VAT, Non-VAT, or VAT-Exempt. The system works out the VAT amount itself. Nobody types it.
- Each procedure can be given a usual setting, so staff rarely need to change it. All entries in the October 3 report are non-VAT.

- The same approach will be used for expenses.
- In the expenses list, 4 of the 5 VAT entries do not match a standard VAT calculation. One is short by 0.59. Automatic calculation removes this problem.

3.4 Patient records and search

- **Proposed:** keep a proper list of patients, because the current system only guesses from typed names. Two spellings of the same name count as two patients, and two people with the same name count as one.
- When staff type a name, matching patients appear as suggestions. If there is no match, a new patient can be added on the spot. A warning appears if the name looks like one already on file.
- After a patient is chosen, the system shows whether this is a **New** or **Returning** patient, with the date and dentist of the last visit. Staff can correct it if the patient was seen before the system was in use.
- A reservation fee does not count as a visit. A follow-up check-up with no payment does count.

3.5 Invoice number

- **Proposed:** staff type the invoice number from the paper booklet. The system will no longer make one up.
- Only 1 of the 9 entries in the Day End Report has an invoice number, so the field stays optional, with a gentle reminder when it is empty and a way to list the entries that still need one.
- The system warns if a number has already been used, and shows the last number used as a hint.

3.6 Proof of payment

- Today reference numbers (GCash, GoTyme, card approval) are typed into the Remarks box. This was the case for 6 of the 9 entries.
- **Proposed:** a separate **Reference number** box, plus an option to **upload a photo or PDF** of the receipt or approval slip with the payment.
- Files are kept private and visible only to signed-in staff. Only the administrator can remove them.
- Accepted files: photos (JPG or PNG) or PDF, up to 5 MB each, up to 3 per payment.
- The same upload will later be available for expense receipts.

3.7 Add Expenses

The expense form will follow the columns of the Operating Expenses list:

In the clinic's list	In the new form
Date, Description	As now
Supplier name, address, TIN	Choose a saved supplier. Address and TIN fill in automatically. New suppliers can be added from the form.
Remarks (check no., invoice no., GCash reference)	Reference number, plus a separate Remarks box
Department	Branch, with a Head Office choice added for the "ADT DHCS INC" entries
Services / Goods	A choice on the form
VAT / Non-VAT	VAT, Non-VAT or VAT-Exempt. VATable amount and VAT are calculated.
Particulars	The clinic's own list: Rent, Dental Supplies, Office Supplies & equipment, Repairs, Events, Miscellaneous (more to be added)

In the clinic's list	In the new form
Source of fund	Cash, GCash, Credit Card, BDO Check (more if needed)
Invoice amount	As now
Receipt	Optional upload, same as for payments

Rules proposed: a VAT expense must have a supplier name and TIN (true for all 5 VAT entries in the list). Cash purchases without a supplier are still allowed. A warning appears if the same supplier, reference number and amount are entered twice.

3.8 Uploading the daily Day End Report

- The system **cannot currently upload the new Day End Report format**. All 9 entries would be rejected, and the Breakdown and Total rows would be read as entries.
- **Proposed fix (first priority)**: accept the new format, skip the Breakdown and Total rows, recognise reservation fees automatically, and pick the branch from the report title ("MARIKINA").
- Re-uploading a corrected report should update the same entries instead of creating duplicates.

4. Other findings

- **New entries show as unpaid**. Entries added in the system, or uploaded from a report, currently show "amount due" until someone records a payment separately. The updated form will record the first payment together with the invoice, and the daily upload will do the same.
- **Card charges follow fixed rates**. On the 1,615.00 card payment, the fee of 45.22 is 2.8% and the withholding tax of 8.08 is 0.5%. The report shows a net amount of 1,561.71; subtracting the two charges gives 1,561.70, so the report is one centavo higher.
- **Reservation fees** (600.00 on October 3) are included in the Day End total.
- **The expenses list is headed "September 2026"** but every entry is dated 10/01/2026.
- **One expense entry looks like a typing slip**. A non-VAT purchase of 118.00 (Antipolo) has 9.00 in the VATable column.

5. Items for the clinic to confirm

#	Question	Why it matters
1	Should a dentist's commission be based on the full price or the discounted price? Who carries the cost of a PWD discount, the clinic or the dentist?	Changes dentists' pay on every discounted sale.
2	Confirm PWD and Senior discount rates, whether they change the VAT treatment, and whether the cardholder's ID number must be written on the invoice (please check with the accountant).	Needed to set up the discount choices correctly.
3	Is the invoice number required or optional? Are booklets numbered separately for each branch?	Decides how the duplicate warning works.
4	Where should uploaded receipts be stored?	Needed before receipt upload can be turned on.
5	Should "ADT DHCS INC" (head office) be added as a Head Office entry for expenses?	Needed for the head-office rent and other head-office expenses.

#	Question	Why it matters
6	For expenses, is the date written month/day/year? Do bills paid on October 1 count for September or October?	Decides which month each expense appears in.
7	Should the system use the clinic's own Visit ID style (for example 202610-003-001, RES20261003-010)?	Makes the system and the paper report match.
8	Confirm reservation fees count toward collections.	They are in the Day End total today.
9	Confirm the card fee (2.8%) and withholding tax (0.5%) and which payment types they apply to.	Lets the form suggest these amounts.
10	Send the full list of expense Particulars. Does the accountant need the supplier's TIN and address kept exactly as on each invoice?	Only 6 categories appear in the sample.

6. Next steps and order of work

Step	Work	Depends on
1	Make the daily Day End Report upload work with the new format	Nothing
2	Common groundwork: VAT calculation, discount choices, supplier and patient lists	Items 2 and 10
3	Patient list with suggestions and New / Returning	Step 2
4	New Add Expenses form with suppliers	Step 2, items 5 and 6
5	Invoices with several procedures, discounts, VAT per line, typed invoice number, first payment recorded on the form	Steps 2 and 3, items 1, 3 and 7
6	Proof-of-payment upload, then the same for expense receipts	Step 5, item 4
7	Optional: upload expenses from the clinic's list, and a "Discounts given" summary on the dashboard	Steps 4 and 5

Before work starts: the clinic's answers to items 1, 3, 4 and 5 are needed first, because they change how the system is built. The rest adjust the default settings.

Please note: these minutes record the proposed approach. Nothing has been built yet.
